

SANAT KUMAR JHA

Roorkee, Uttarakhand

✉ sanatjha4@gmail.com  [sanatjha4](#)  [Sanat-Jha](#) </> [Portfolio](#)

EDUCATION

Indian Institute of Technology, Roorkee
B.Tech - Production and Industrial Engineering

2024 – 2028
Roorkee, India

TECHNICAL SKILLS

Languages: Python, JavaScript, Dart, C++, C
Technologies/Frameworks: Django, Flask, FastAPI, Flutter, TailwindCSS, React.js, Next.js, Reflex
DevOps/System Design: AWS, Azure, Docker, CI/CD, API Design, Database Design
AI: LLMs, RAG, Langchain, Livekit

EXPERIENCE

Attacked.AI  | Backend + AI Engineer Intern **March 2025 – June 2025**

- Designed backend architecture for adversarial attack simulation platform for enterprise cyber-risk assessment.
- Implemented fully agentic workflows for real-time threat scenario generation.
- Integrated LiveKit-based voice interaction for conversational AI adversary agents.

SeraphGuard Labs  | Founding Engineer - Backend Intern **November 2025 – January 2026**

- Architected and developed the core backend infrastructure for Guardian AI, a parental control platform.
- Built secure device-linking and real-time event streaming between Flutter child devices and dashboards.
- Designed a privacy-focused, scalable multi-tenant system architecture.

ASME, IITR  | Drone Engineer - Team Member **October 2025**

- Developed a payload-carrying drone for accurate pickup and drop at predefined locations.
- Used Pixhawk for flight control, Arduino for payload automation, and GPS for waypoint navigation.
- Handled system integration, configuration, and payload stability testing.

PROJECTS

Deskrupt  | Winter of Code, SDS Labs | Flutter (Desktop), Django, Jinja, SQLite

- Built a Windows desktop customization ecosystem.
- Enables dynamic wallpapers and animations designing, widgets customization, and shortcuts configurations.
- Developed a Django cloud for cross-device configuration sync and enabled community-based theme sharing.
- Created a HTML inspired design system (margin, padding, border-radius, etc.) for customization.

Analytiq  | 1st Rank, Merge-Conflict Hackathon | FastAPI, React, DuckDB, Azure

- Built a web observability platform tailored for non-technical founders.
- Simplified complex website analytics into intuitive dashboards with actionable performance metrics.
- Integrated context-aware AI chat for business insights from live monitoring data.
- Designed agentic architecture with expert agents, dynamic dashboards, and anomaly alerts.

SnapQuote  | Freelance Project (Internal Automation Tool) | Flask, React, RAG, Google OAuth2

- Built an intelligent quotation automation platform for a Dubai-based industrial hardware business.
- Parsed email RFQs, extracted product requirements, and auto-generated formal quotations.
- Designed an asynchronous event-driven architecture to process 3,000–5,000+ emails daily.
- Integrated RAG-based recommendations to suggest similar historical orders and accelerate the sales cycle.

Django LiveLoad  | Developer Utility | Python, Django, Django Channels, Web Sockets

- Created a plug-and-play real-time progress visibility python-package for Django developers.
- Used WebSockets to enable live status tracking of background tasks.
- Supported workflows like scraping, file processing, and ML inference.
- Achieved 874 total downloads, averaging 5 downloads per day (34 per week).

TruelyFAQ  | Self-Initiated Project | Django, NLP, REST APIs, E-mail automation

- Built an API-driven FAQ automation service using NLP.
- Analyzed recurring user queries to identify high-frequency issues.
- Automatically updated website FAQs to reduce manual support effort.

CERTIFICATIONS

- Python Course - HackerRank 
- AWS Basics Course - KodeKloud 
- Kafka Crash Course - KodeKloud 
- Python Programming Foundation - Apponix
